## Notes

Green / red: recall higher / lower than the old run. Total = GT sites found ÷ 225. New cost is exact; old cost is the logged estimate (all input priced uncached), true range \$10.67–\$12.17.

## Key findings

- **Recall:** street recall up 72.0% → 74.2%; 5 suppliers improved, mostly small ones (WeylChem 0% → 86%, Exportadora de Cafe 0% → 100%).
- **Cost:** \$11.38 → \$6.05; a 43–50% cut against the old run's true range, driven by 44% fewer web searches.

## How ISO certificates improved the results

- **Multiple sources:** each site now lists every page or document showing its address; 97 of 330 sites (29%) have 2 or more sources, where the old run kept only 1.
- **Confirmation:** 17 of the 167 matched sites are backed by a certificate PDF, a second independent source for the address.
- **Cost:** near zero; 53 PDFs read locally for free and only 3 needed a paid fallback.

## Cost-saving changes: free sources before paid search

- **Free registry lookups:** the agent fetches GLEIF (LEI register), SEC EDGAR (10-K properties), Wikipedia and UK Companies House directly by URL, with no web search; GLEIF and Wikipedia were checked for all 20 suppliers.
- **Sitemap first:** it reads the supplier's sitemap.xml to find locations, contact and certificate pages without searching for them (19 of 20 suppliers, vs 8 sitemap reads in the whole 122-supplier run).
- **Free page and PDF reading:** pages are read with a free plain fetch, then a ~\$0.001 browser fetch; PDFs are read locally, with OCR for scans.
- **Links reused, not searched:** PDF and certificate links on fetched pages are handed to the agent to open directly.
- **Search guards:** one certificate probe per supplier, near-duplicate searches refused, and no guessed domains.
- **Paid fallback capped:** at most 10 paid page retrievals per supplier and 2 per website.
- **Effect:** page fetches up 374 → 515 while web searches fell 754 → 420 and paid fallbacks 53 → 33.
